Female Genital Mutilation Fact Sheet

**What is Female Genital Mutilation?** Female genital mutilation (FGM) is any procedure involving the partial or total removal of the external female genitalia or other injury to the female genital organs and is often performed on girls between the ages of 4 and 14 to ensure their virginity until marriage.

**Is Female Genital Mutilation Harmful?** Yes. The World Health Organization reports that FGM has no health benefits and can cause a number of health problems. Immediately following the procedure, girls are at risk for severe pain, shock, bleeding, bacterial infection, and injury to nearby tissue. In the long term, girls and women who have suffered this procedure are at risk for recurrent bladder and urinary tract infections; cysts, infertility, and complications during childbirth.

**Is Female Genital Mutilation Practiced in the United States?** Because this is a private ritual that occurs within the secrecy of the family, there is no way of knowing exactly how prevalent FGM is in the U.S. Research conducted by the Centers for Disease Control and Prevention found that approximately 513,000 women and girls in the U.S. have either suffered the procedure or are at risk of FGM, a number that approximately doubled between 2000 and 2014. The estimated number of girls at risk of FGM in the US has quadrupled since 1997.

**Is Female Genital Mutilation a Crime?** Yes, FGM has been a crime under federal law since 1996 and is punishable by up to five years in prison.

In January 2013, the federal FGM law was amended by the Transport for Female Genital Mutilation Act, which prohibits knowingly transporting a girl out of the country for the purpose of undergoing FGM. The Act was designed to address the problem of “vacation cutting”, in which girls living in the United States are taken to their parents’ country of origin (typically during school breaks) to undergo the procedure. Under the new federal law, anyone found guilty of doing so may be sentenced to up to five years in prison.

FGM is also a crime in the following 25 states:

- Arizona
- California
- Colorado
- Delaware
- Florida
- Georgia
- Illinois
- Kansas
- Louisiana
- Maryland
- Minnesota
- Missouri
- Nevada
- New Jersey
- New York
- North Dakota
- Oklahoma
- Oregon
- Rhode Island
- South Dakota
- Tennessee
- Texas
- Virginia
- West Virginia

**The AHA Foundation has successfully advocated for laws criminalizing FGM in the United States:**

- **Federal Extraterritoriality Amendment** - In January 2013, President Obama strengthened the existing federal FGM ban by adding an “extraterritoriality” component, making it illegal to knowingly transport a girl out of the country for the purpose of undergoing the procedure. The AHA Foundation’s Founder, Ayaan Hirsi Ali, and our legislative team specifically consulted with Representative Crowley (NY), a key proponent of the Bill, on the serious problem of “vacation cutting”, and lent our support for the language contained in the new Bill.

- **New Jersey** - In February 2012, New Jersey State Senator Loretta Weinberg introduced the AHA Foundation’s model FGM legislation, which was signed into law in 2014.

- **Louisiana** - In May of 2012, Governor Jindal signed into law a bill criminalizing FGM in the state of Louisiana. This bill includes the AHA Foundation’s model language that also makes it a crime to remove a girl from the state for the purpose of FGM; the law went into effect August 1, 2012.

- **Kansas** - In February of 2013, the AHA Foundation provided written testimony in support of a proposed FGM bill in Kansas, which includes an extra-territoriality component and other provisions contained in our model legislation. The Bill was signed into law by Governor Brownback on April 10, 2013.

- **South Dakota** - The AHA Foundation provided a response to address concerns that a ban on FGM would infringe on religious freedom. The Foundation also sent a letter in support of the bill to all members of the South Dakota Senate. The legislation was passed by the Senate and signed into law in March 2015.
