Female genital mutilation/cutting (FGM/C) refers to “all procedures involving partial or total removal of the female external genitalia or other injury to the female genital organs for non-medical reasons.” More than 125 million girls and women alive today have been cut in the 29 countries in Africa and the Middle East where FGM/C is concentrated. As many as 30 million girls are at risk of being cut before their 15th birthday if current trends continue. FGM/C is a violation of girls’ and women’s human rights and is condemned by many international treaties and conventions, as well as by national legislation in many countries. Yet, where it is practised FGM/C is performed in line with tradition and social norms to ensure that girls are socially accepted and marriageable, and to uphold their status and honour and that of the entire family. UNICEF works with government and civil society partners towards the elimination of FGM/C in countries where it is still practised.

Source: MICS 2011
In Iraq, the practice of FGM/C is concentrated in a few northern regions.

**Percentage of girls and women aged 15 to 49 years who have undergone FGM/C, by governate**

- 8% in Total
- 9% in Urban
- 6% in Rural
- 10% in Poorest
- 4% in Richest

**Percentage of ever-married girls and women aged 15 to 49 years with at least one living daughter who has undergone FGM/C, by residence, mother’s education and household wealth quintile**

- Total: 3, Urban: 4, Rural: 2, No education: 10, Primary complete: 2, Secondary and higher: 1, Koranic/Non-standard: 0, Poorest: 4, Richest: 1

**Among daughters of cut girls and women, the percentage of those who have undergone FGM/C, by mothers’ attitudes about whether the practice should continue**

- Daughters whose mothers think FGM/C should continue: 66
- Daughters whose mothers are unsure: 48
- Daughters whose mothers think FGM/C should stop: 25

**When and how is FGM/C performed?**

Approximately half of girls and women underwent FGM/C after age 5, but for one in four women it is unclear at what age the practice occurred.

**Percentage distribution of girls and women aged 15 to 49 years who have undergone FGM/C, by age at which cutting occurred**

- 0-4 years: 27
- 5-9 years: 40
- 10-14 years: 6
- 15+ years: 26
- Don’t know/ Missing

**Percentage distribution of ever-married girls and women aged 15 to 49 years with at least one living daughter who has undergone FGM/C, according to the type of person/practitioner performing the procedure**

- Health personnel: 51
- Traditional practitioner: 29
- Other: 14
- Don’t know/ Missing: 6

Notes: The boundaries and the names shown and the designations used on the map do not imply official endorsement or acceptance by the United Nations. Only categories with 25 or more unweighted cases are presented. Due to rounding, some of the data presented may not add up to 100 per cent. There is no ethnicity or religion data for Iraq. 'Health personnel' includes doctors, nurses, midwives and other health workers; 'Traditional practitioner' refers to 'traditional (unlicensed) birth attendant/grandmother'; 'Other' refers to the combined categories 'other' and 'relative/friend'.

Note: There are no ethnicity data for Iraq.
INTER-COUNTRY STATISTICAL OVERVIEW

Percentage of girls and women aged 15 to 49 years who have undergone FGM/C

- Benin: 1%
- Togo: 1%
- Ghana: 2%
- Niger: 3%
- Iraq: 4%
- Cameroon: 5%
- Uganda: 6%
- Burkina Faso: 7%
- Kenya: 9%
- Côte d'Ivoire: 9%
- Senegal: 10%
- Nigeria: 11%
- Ethiopia: 14%
- Guinea-Bissau: 17%
- Chad: 21%
- Mauritania: 31%
- Yemen: 34%
- Sudan: 37%
- Liberia: 38%
- Eritrea: 41%
- Egypt: 42%
- Gambia: 45%
- Somalia: 49%
- Sierra Leone: 54%
- Guinea: 64%
- Mali: 65%
- United Republic of Tanzania: 66%

Sources: DHS, MICS, National Social Protection Monitoring Survey and SHHS, 1997-2012

Notes: Data on attitudes for Yemen refer to ever-married girls and women. In Liberia, girls and women who have heard of the Sande society were asked whether they were members; this provides indirect information on FGM/C since it is performed during initiation into the society. Data on daughters for Iraq refer to ever-married girls and women with at least one daughter who has undergone FGM/C. Data on attitudes for Ghana are from MICS 2006, for Nigeria from DHS 2008, and for Sierra Leone from DHS 2008 as data from the most recently available MICS surveys are not comparable. In Liberia, only cut girls and women were asked about their attitudes towards FGM/C; since girls and women from practising communities are more likely to support the practice, the level of support in this country as captured by the DHS 2007 is higher than would be anticipated had all girls and women been asked their opinion.
