Female genital mutilation/cutting (FGM/C) refers to “all procedures involving partial or total removal of the female external genitalia or other injury to the female genital organs for non-medical reasons.” More than 125 million girls and women alive today have been cut in the 29 countries in Africa and the Middle East where FGM/C is concentrated. As many as 30 million girls are at risk of being cut before their 15th birthday if current trends continue. FGM/C is a violation of girls’ and women’s human rights and is condemned by many international treaties and conventions, as well as by national legislation in many countries. Yet, where it is practised FGM/C is performed in line with tradition and social norms to ensure that girls are socially accepted and marriageable, and to uphold their status and honour and that of the entire family. UNICEF works with government and civil society partners towards the elimination of FGM/C in countries where it is still practised.

SELECTED STATISTICS ON WOMEN’S STATUS

- **2011 National decree/legislation banning FGM/C passed**
- **7%** of women 20-24 years were married or in union before age 15
- **22%** of women 20-24 years were married or in union before age 18
- **33%** of women 20-24 years have given birth by age 18
- **40%** of women 15-49 years think that a husband/partner is justified in hitting or beating his wife under certain circumstances
- **14%** of women 15-49 years in union currently using any contraceptive method
HOW WIDESPREAD IS THE PRACTICE?

Half of all girls and women of reproductive age have undergone FGM/C; the practice is nearly universal among Muslims.

WHEN AND HOW IS FGM/C PERFORMED?

Around one in three girls are cut after the age of ten.
WHAT ARE THE PREVAILING ATTITUDES TOWARDS FGM/C?

More than half of girls and women think the practice should stop

Percentage of girls and women aged 15 to 49 years who have heard about FGM/C, by their attitudes about whether the practice should continue

- Think FGM/C should continue
- Think FGM/C should stop
- Say it depends/are not sure

There has been no significant change in the prevalence of FGM/C

IS THE PRACTICE OF FGM/C CHANGING?

Notes: There are no ethnicity data from the most recent survey for Guinea-Bissau.

Source for all of the above charts: MICS/RHS 2010
Percentage of girls and women aged 15 to 49 years who have undergone FGM/C

Percentage of girls and women aged 15 to 49 years with at least one living daughter who has undergone FGM/C

Percentage of girls and women aged 15 to 49 years who have heard about FGM/C and think the practice should continue

Notes: Data on attitudes for Yemen refer to ever-married girls and women. In Liberia, girls and women who have heard of the Sande society were asked whether they were members; this provides indirect information on FGM/C since it is performed during initiation into the society. Data on daughters for Iraq refer to ever-married girls and women with at least one daughter who has undergone FGM/C. Data on attitudes for Ghana are from MICS 2006, for Nigeria from DHS 2008, and for Sierra Leone from DHS 2008 as data from the most recently available MICS surveys are not comparable. In Liberia, only cut girls and women were asked about their attitudes towards FGM/C; since girls and women from practising communities are more likely to support the practice, the level of support in this country as captured by the DHS 2007 is higher than would be anticipated had all girls and women been asked their opinion.
