Female genital mutilation/cutting (FGM/C) refers to “all procedures involving partial or total removal of the female external genitalia or other injury to the female genital organs for non-medical reasons.” FGM/C is a violation of girls’ and women’s human rights and is condemned by many international treaties and conventions, as well as by national legislation in many countries. Yet, where it is practised, FGM/C is performed in line with tradition and social norms to ensure that girls are socially accepted and marriageable, and to uphold their status and honour and that of the entire family. UNICEF works with government, civil society partners and other UN agencies towards the elimination of FGM/C in countries where it is still practised.

2015 National decree/legislation banning FGM/C passed

Source: DHS 2013
Three in four girls and women of reproductive age have undergone FGM/C

HOW WIDESPREAD IS THE PRACTICE?

Percentage of girls and women aged 15 to 49 years who have undergone FGM/C by local government areas

- Less than 10%
- 10% - 25%
- 26% - 50%
- 51% - 80%
- Above 80%

Percentage of girls and women aged 15 to 49 years who have undergone FGM/C, by place of residence and religion

- Total
- Rural
- Urban
- Muslim
- Christian

Percentage of girls and women aged 15 to 49 years who have undergone FGM/C, by age at which cutting occurred

- 0-4 years
- 5-9 years
- 10-14 years
- 15+ years
- Don’t know/Missing

Among daughters of cut girls and women, the percentage of girls aged 0 to 14 years who have undergone FGM/C (as reported by their mothers), by residence, mother’s education and wealth quintile

- Total
- Rural
- Urban
- No education
- Primary complete
- Secondary or higher
- Poorest
- Richest

Percentage of girls aged 0 to 14 years who have undergone FGM/C (as reported by their mothers), according to the type of FGM/C performed

- Cut, flesh removed
- Sewn closed
- Type not determined/Not sure/Don’t know

WHEN AND HOW IS FGM/C PERFORMED?

More than half of girls and women were subjected to FGM/C before age five

Percentage distribution of girls and women aged 15 to 49 years who have undergone FGM/C, by type of person/practitioner performing the procedure

- Health personnel
- Traditional practitioner
- Don’t know/Missing

Notes: The boundaries and the names shown and the designations used on the map do not imply official endorsement or acceptance by the United Nations. Only categories with 25 or more unweighted cases are presented. Due to rounding, some of the data presented may not add up to 100 per cent. Prevalence data for girls aged 0 to 14 reflect their current, but not final, FGM/C status since some girls who have not been cut may still be at risk of experiencing the practice once they reach the customary age for cutting. Therefore, the data on prevalence for girls under age 15 is actually an underestimation of the true extent of the practice. Since age at cutting varies among settings, the amount of underestimation also varies and this should be kept in mind when interpreting all FGM/C prevalence data for this age group. Data on the prevalence of FGM/C among daughters of mothers who are unsure about the continuation of the practice are based on 25-49 unweighted cases. Data for girls and women are used to report on age at cutting since the earlier MICS (2005-2006) did not have questions on age at cutting for most recently cut daughters. "Health personnel" includes doctors, nurses, midwives and other health workers; "Traditional practitioner" includes traditional circumcisers, traditional birth attendants, traditional midwives and other types of traditional practitioners. The 2013 DHS did not collect data on the prevalence of FGM/C among girls aged 0 to 14 years.

**WHAT ARE THE PREVAILING ATTITUDES TOWARDS FGM/C?**

Almost two of three girls and women in Gambia support the continuation of FGM/C

![Graph showing the percentage of girls and women aged 15 to 49 years who have heard about FGM/C and think the practice should continue, by wealth quintile, education, religion and age.](image)

Source: MICS 2010

**IS THE PRACTICE OF FGM/C CHANGING?**

There has been no significant change in the prevalence of FGM/C in Gambia

![Graph showing the percentage of girls and women aged 15 to 49 years who have undergone FGM/C, by current age.](image)

INTER-COUNTRY STATISTICAL OVERVIEW

Percentage of girls and women aged 15 to 49 years who have undergone FGM/C

Percentage of girls aged 0 to 14 years who have undergone FGM/C (as reported by their mothers)

Percentage of girls and women aged 15 to 49 years who have heard about FGM/C and think the practice should continue

Notes: Egypt data refer to girls aged 1-14 years and Indonesia data refer to girls aged 0-11 years. An older source is used to report on the prevalence of FGM/C among girls aged 0-14 years for Gambia (MICS 2010) since the 2013 DHS did not collect these data. MICS data for Ghana (2011) could not be used to report on attitudes towards FGM/C due to the fact that information is missing for girls and women with no living daughters; data from MICS 2006 are used instead. In Liberia, only cut girls and women were asked about their attitudes towards FGM/C; since girls and women from practising communities are more likely to support the practice, the level of support in this country as captured by the 2013 DHS is higher than would be expected had all girls and women been asked their opinion. Prevalence data on FGM/C for girls and women aged 15-49 years and data on attitudes towards FGM/C are not available for Indonesia.
